## GlobalPro- Travel and Expense Management Solutions

GlobalPro software provides an electronic structure to manage Travel and Expense within an organisation enabling significant saving to be made in this high cost area.

Research indicates that savings of up to 30% of T & E expenditure are available from:

- Increased productivity
- Dissemination of policy requirements throughout the organisation
- Extraction of consolidated reports on T & E costs with the resultant ability to negotiate preferential arrangements.

GlobalPro addresses the above requirements and is regarded as one of the most comprehensive T & E management applications available on the world market.

The first market ready product, GlobalPro V 3.0 (LAN based), was released in October 1998. V 3.0 proved to be sound and feedback from the 45 initial sites in Australia and New Zealand confirmed that the company was on the right track.

Requests for enhancements from these sites were incorporated into the release of V 3.1 (April 2000).

Simultaneously the development of V 4.0 (WAN based) and Enterprise (Web based) commenced. V 4.0 was released in April 2001 and Enterprise is scheduled for release in Q1 2002.
